Hints for Project 8

Where Can I Pass Parameters by Reference?

Since a method can only return one value, what do you do if you want a method to return two or more values?

Displaying The Values on the Dice

You can do anything you want to in the project to show the user what values are on the dice. The easiest thing you can do is display the integer values in two TextBoxes. The sample program uses a multi-line Textbox. Each line of the Textbox is formatted to show the dots on the dice. The code to show the dots for a roll of three looks something like this:

```
string three = "l" + nL + " l " + nL + " l";
```

The Font property of the TextBox uses the WingDings font, The letter l calls out the dot character in the WingDings font.

The nL in the above code stands for System.Environment.NewLine.
